

Plant Growth Regulators and Use on Paspalum

Primo, T-Nex 1AQ (trinexapac-ethyl): 0.13 ai/A on fairways; 0.125 fl oz/M or less on greens

**New granular product: Governor (trinexapac-ethyl)—Andersons Golf Products

Trimmit (paclobutrazol): not sensitive to rates or timing of applications; seed head suppression; no/minimum growth suppression

Proxy (ethephon): seed head suppression; no/minimal growth suppression

Cutless (fluprimidol): growth suppression <75°F and >85°F

Embark (mefluidide): growth suppression; seed head suppression; quite sensitive (rates being developed)

Retard (maleic hydrazide): unknown

SePRO combined product: Cutless 50W (fluprimidol-type IIB PGR) combined with Primo MAXX (trinexapacethyl—type IIA PGR) to give synergistically enhanced color, less initial bronzing, longer length activity, less turf rebound effect, and reduced *Poa annua* encroachment.
