P A S P A L U M

Platinum TE™ Seashore Paspalum delivers true excellence in turfgrass.

When the highest standards are set for turfgrass, Platinum TE Paspalum exceeds expectations. This paspalum innovation, developed by renowned turf breeder Dr. Ron R. Duncan, delivers unsurpassed playability, appearance, and sustainability.

Platinum TE features a darker green color than other paspalum cultivars and achieves superior striping. Plus, Platinum TE plays as good as it looks. Thanks to its very fine leaf blade texture and short internode spacing, this turfgrass offers a compact canopy surface for exceptional ball setup and outstanding density.

Unmatched salt tolerance means Platinum TE thrives in coastal settings and tolerates TSE irrigation. And when it comes to low light intensity conditions, Platinum TE has exhibited superior growth performance and sustainability. As a result, it's an ideal choice for areas with persistent clouds or rain and stadiums restricting sunlight.

The versatility of Platinum TE is unsurpassed. Adaptable to a wide range of mowing heights, Platinum TE is perfect for installation tee to green on the golf course, meets the needs of the most challenging sports fields, and performs with excellence in landscaping.

For true excellence in your turfgrass, turn to Platinum TE.
